Book Projects

Córdova, Abby. Violence against Women and Political Participation in Contexts of Criminal Violence.

- Project funded by the Kellogg Institute for International Studies, University of Notre Dame, with a Visiting Scholar Fellowship.

Abstract: Across the developing world, unprecedented levels of criminal violence led by non-state armed groups have coincided with alarming rates of violence against women (VAW). In this book project, I develop a theoretical framework that helps explain how non-state armed groups' territorial control make women more vulnerable to gendered violence and its consequences for women's political participation. I argue that criminal groups' territorial control increases women's vulnerability to gendered violence in and outside the home, which undermines women's likelihood of engaging in politics. I test my hypotheses in the context of gang's territorial control in El Salvador, relying on quantitative and qualitative data. The quantitative analyses use data from two large-scale original surveys at the neighborhood level and a nationally representative survey of VAW. These data allow me to employ survey experiments and advanced statistical techniques to systematically examine the links between gangs' territorial control, VAW, and women's political participation.

Córdova, Abby, and Annabella España. Making Decentralization Work for Women: The Electability and Representation of Women in Local Governments.

- Project funded by the Carrie Chapman Catt Center at Iowa State University, the American Political Science Association (APSA), the Office of the Vice President for Research and the College of Arts and Science at the University of Kentucky and the College of Social Sciences at California State University, Fresno

Abstract: The third wave of democratization resulted in greater autonomy and more responsibilities for local governments in the developing world. One of the expectations was that decentralization reforms would bring opportunities to improve the political representation of historically marginalized populations, including women. In this book project, we seek to identify the challenges that Latin American women still face to be elected to office and influence public policy at the local level. We argue that the prevalence of gender stereotypes undermines women's representation in local governments, particularly when women are members of an opposition party. To test our theory, we rely on qualitative and quantitative data. More specifically, we will use data from an original multi-year elite survey carried out among 1000 elected council members across 101 municipalities in El Salvador, in-depth interviews with party leaders and council members, content analysis of council meetings, and electoral data from more than 5,000 municipalities across 22 Latin American countries.
